

# DBIT1305 Web Application Development

## Lab 1

### HTML

Select any topic/area of interest to develop a web application in. For example: Cat Adoption Website.

Use the instructions below to create a simple website using only HTML. Try and be creative as possible using HTML, you can draw out a sketch before starting. All elements should be used **but not necessarily on all the pages**.

1. Create **at least** three HTML files in your lab folder. Add a title to each page.
2. Create links to the HTML pages created on **each** page for easier navigation between the pages.
3. Add a heading to each page. They should be centered.
4. Add paragraphs.
5. Use lists.
6. Change the color of any one sentence in a paragraph on a page.
7. Add images and Adjust image sizes where necessary.
8. Use tables.
9. Create a form on any page using at least five different form elements.
10. Add a horizontal line on any page.
11. Add a link to any text in a paragraph.
12. Italicize and make bold sentences in any paragraph.
